

Supplementary material, Figure 3 Analysis of soluble GFR α 1 variant and RET extracellular domain expression in insect cells. **(A)** The wild-type (WT) and variant GFR α 1 medium supernatants after centrifugation for 10 min at 2000 x g, +4°C were resolved on a 8-25% SDS-PAGE gel and Western blotted with anti-FLAG antibodies. **(B)** RET extracellular domain (RET^{ED}) medium supernatant after centrifugation for 10 min at 2000 x g, +4°C was resolved on a 8-25% SDS-PAGE gel and Western blotted with anti-FLAG antibodies. Purified GFR α 1 domain 3 (D3) and soluble GFR α 1 medium supernatant from the same SDS-PAGE run and anti-FLAG Western blotting are shown for reference.
