

Table S1. Parameter estimates of $V_{c,max}$ and J_{max} using the “conventional” method of curve-fitting A - C_i data (i.e., assuming g_m is infinite and $C_i = C_c$), as described by Long and Bernacchi (2003). Values are corrected from leaf temperature at measurement to 32°C using the temperature response functions of Bernacchi et al. (2001) and Bernacchi et al. (2003). N=4 for each timepoint.

Year	Stage	CO ₂	Cultivar	$V_{c,max}$ at 32°C		J_{max} at 32°C	
				Mean	SE	Mean	SE
2012	Mid GF	Ambient	Koshihikari	174.70	4.57	262.36	6.79
