

Table S2 (A) P-values of Kolmogorov-Smirnov (K-S) test of pairwise comparison between groups in the RMD distribution and basic descriptive statistics for the RMD values. Upper diagonal P-values are from randomly selected non-evQTL genes. Results obtained from the Box-Cox normalized and not normalized data are given. **(B) The per-probe statistics of RMD values for larger variance groups (MZ-L and DZ-L).** Probes with no SNP in either groups are not shown.
