

**Supplementary information, Figure S3** LM infection induces generation of CD11a<sup>hi</sup>FcγRIII<sup>hi</sup> B cells in both *Ifnγ*<sup>-/-</sup> mice and *Ifngr1*<sup>-/-</sup> mice. WT, *Ifnγ*<sup>-/-</sup> and *Ifngr1*<sup>-/-</sup> mice were i.p. infected with 2×10<sup>6</sup> LM. The CD11a<sup>hi</sup>FcγRIII<sup>hi</sup> cell population in splenic B cells was determined 3d after LM infection.
