

**Figure S2: Quantification of SA and JA in uninfected grapevine plants treated with PS3, Lam, or adjuvant.**

Endogenous SA and JA were quantified by LC-MS in grapevine plants during 48 hours post-treatment (hpt) with PS3, Lam or adjuvant (Adj). No statistical difference ( $P < 0.05$ , student  $t$  test) has been found comparing PS3 vs Adj or Lam vs Adj from three biological independent experiments ( $n=3$ ).
