

SUPPLEMENTARY FIG. S7. Differentiation marker expression in teratoma. Immunofluorescence in sections (5 μm) of 6-week-old teratoma derived from WA07 cells that had previously been cultured in 0.5 wt.% NFC hydrogel for 26 days shows the expression of β -tubulin type III (b-tub) (A) and muscle actin (MA) (B, C). Scale bars = 100 μm (A) and 200 μm (B, C).
