

Supplementary Figure 2. Doll et al.

Supplementary Figure 2. Antibodies are required to control breakthrough parasitemia and to mediate protection from sporozoite challenge. **(A)**, Naive C57Bl/6 and μ s-AICDA^{-/-} mice were administered 10,000 virulent sporozoites with 10, or 25-30 days of CQ chemoprophylaxis, respectively. **(B)**, Mice immunized in **(A)** were challenged on d79 post-immunization with 1,000 virulent *P. yoelii* sporozoites and monitored for patent parasitemia and survival. Institutional animal guidelines for morbidity required the euthanization of last μ s-AICDA^{-/-} mouse.
