

Figure S1: Genomic organization of the *Sau3AI* restriction system locus in *L. monocytogenes* strains of different serovar: QOC1, QOC2, FSL N3-165: serovar 1/2a; F2365: serovar 4b; SLCC7179: serovar 3a. Homologous proteins are shown in the same color. Parallelograms indicate amino acid identity between the putative restriction enzyme and the putative DNA methylase: light grey: amino acid identity below 90%, dark grey: amino acid identity above 90%. EGDe and F2365 locus_tags are indicated.
