Supporting Information

Figure S1 Phylogenetic network analysis of multilocus sequence typing data of 111 *C. parvum* IId isolates. The number labeled beside circle indicates the MLST as shown in table S1. Each circle indicates a unique MLST of *C. parvum* and Circle size represents the number of samples present in each MLST.

Figure S2 Linkage disequilibrium (LD) among different populations by DnaSP analysis of concatenated sequences from 12 genetic loci.

Figure S3 Estimate of the number of ancestral population (K). (A) Plot of the mean likelihood $L(K)$. (B) Plot of the mean difference between successive likelihood values of K, $L'(K) = L(K) - L(K - 1)$. (C) Plot of the mean differences between successive values of $L'(K)$, where $|L''(K)| = |L'(K + 1) - L'(K)|$. (D) Plot of the delta K (ΔK), $\Delta K = m|L''(K)|/s[L(K)]$, where m = mean of the absolute values of $L''(K)$, s = SD of $L(K)$.
