

Supplemental Figure 11

Similar plasma FFA levels during hyperinsulinemic-euglycemic clamp

Plasma FFA levels in the basal state (black bars) and after insulin infusion (white bars) in HFD-fed Fas^{F/F} and Fas^{Δmye} mice. n=4-5. **p = 0.003 (Fas^{F/F}) and **p = 0.006 (Fas^{Δmye}) (Student's *t*-test). Error bars represent SEM.
