

## Supplemental Figure 16

### Blood glucose concentrations and glucose infusion rates during hyperinsulinemic-euglycemic clamp

(A) Blood glucose levels were clamped upon insulin infusion at about 7-8 mmol/l in BM WT ob/ob (black circles) and BM Fas-def ob/ob (green circles) mice. (B) In order to maintain euglycemia, glucose infusion rate was adjusted over time in BM WT ob/ob (black circles) and BM Fas-def ob/ob (green circles) mice. n=5-6. Error bars represent SEM.
