

Supplemental Figure 1

FasL expression in circulating human monocytes

Monocytes were isolated from whole human blood samples and FasL mRNA expression was measured normalized to HPRT. *** $p < 0.0001$ (Student's *t*-test). NGT: normal glucose tolerance (men $n=61$; women $n=70$); T2D: type 2 diabetes (men $n=57$; women $n=58$). Error bars represent SEM.
