

Supporting Information Figure 12. A2MG MP do not alter adhesion molecule expression on TNF- α -stimulated HUVEC. HUVEC were incubated for 4h with buffer, TNF- α (10ng/ml) or TNF- α and A2MG MP ($8 \times 10^5/9.6\text{cm}^2$ well). Subsequently, cells were detached and cell-surface expression for the indicated adhesion molecules was assessed after incubation with fluorescently conjugated antibodies by flow cytometry. Results are mean \pm SEM. n=3 distinct HUVEC and MP preparations.
