

	Total N counted	Percent with reduced or absent ISVs
wt	58	0 ± 0
Stab2 MO	62	18 ± 3.8
Has2 MO	63	0 ± 0
Stab2 MO + Has2 MO	55	51 ± 0.7

Suppl. Table S6. Subphenotypic doses of Stab2 MO + Has2 MO result in a synergistic effect as analyzed in Tg(*kdr*:GFP embryos). Numbers and percentages of embryos displaying absent or reduced ISVs when injected with 1.25 ng Stab2 MO + 1.25 ng p53 MO and/or 8ng Has2 MO + 2.5 ng p53 MO. Value ± represents standard error. Embryos were then analyzed for missing or severely reduced ISV expression at the 24 hpf stage.
