

Supplemental Figure 2. Breadth of *ex vivo* IFN- γ ELISPOT responses to NPM1 peptide pools following MVA-NP+M1 boost. (A) Median and individual *ex vivo* IFN- γ ELISpot responses from vaccinated volunteers at Boost (day 0) and days 7, 21 and 56 post-boost. Negative control was cells stimulated with R10 alone. SFU/ 10^6 PBMCs = spot forming units per 10^6 peripheral blood mononuclear cells.
