

Figure S5 RACK1 modulated IKK activity through the TNFR1 complex. 293T cells were transfected with the Flag-TNFR1 expression vector, and 18 h later, the cells were treated with TNF (20 ng/ml). The 293T cell extracts were immunoprecipitated with mouse anti-Flag antibody and subjected to immunoblot analysis of endogenous proteins. For Flag-TNFR1, immunoblotting with a rabbit anti-Flag antibody. NS*, nonspecific band.
