

Table S4. Analysis of positive selection in sperm genes. Results of likelihood ratio test (LRT) comparing the likelihood values obtained in models M8 and M8a are presented. Evidence of positive selection is detected as the comparison of the LRT with the 50:50 mixture of point mass 0 and χ^2 is greater than the critical value 5.41 at 1% of significance. Inferred positively selected sites with BEB posterior probabilities > 0.95 (*) and > 0.99 (**) are shown.

Protein	Protein name	Reproductive process	LRT M8vsM8a	Positive selection M8vsM8a (df = 2)
