

# Supplementary Figure 1

**Suppl Fig.1. Overexpression of TDP1 or APE1 did not affect the cell cycle profile.** MRC5 cells were transfected with empty vector, Flag-APE1, Myc-TDP1, or both. Cells were fixed in 70% ethanol at 4°C overnight and stained with 10 µg/ml propidium iodide and 0.5 mg/ml RNase in PBS for 30 min. Cell cycle profile was determined using FACScan (Beckmann Coulter).
