

Figure S5. Growth of influenza C/swine/Oklahoma/1334/2011 and influenza C/Johannesburg/1/66 in ST cell cultures. Cells were inoculated respectively with a multiplicity of infection of 0.1 and 1.0 for C/OK and 1.0 and 10.0 for C/JHB and incubated at 33°C. Virus was titrated at the indicated time points on ST cells. Titers of viruses used for inoculation were 6.9 TCID₅₀/mL for C/OK virus and 7.9 TCID₅₀/mL for C/JHB virus.
