

Figure S2: **A**, plots show the gating strategy for lymphocytes. **B**, mean fluorescence intensity (MFI) of FoxP3 in lymphocytes of gastric cancer patients and healthy controls detected by flow cytometry. Actual MFI = the MFI of cells stained with anti-FoxP3 mAb (blue area) minus the MFI of isotype stained controls (black area). MFI in lymphocytes of patient with gastric cancer, MFI=257.03. **C**, MFI in lymphocytes of healthy control, MFI=100.95.
