^a Maternal [m+ or m-] and zygotic [z+ or z-] contribution is indicated.

^b Gonadogenesis defects were assessed using a dissecting microscope and the average penetrance and standard deviation (SD) are reported.

^c Unpaired t-tests were used for statistical comparisons; *ehn-3(rd2)* was compared and the significance is indicated (NS=not significant, p≤0.05*, p≤0.01**, p≤0.001***).

^d *let-526(h185)* is linked to *dpv-5(e61) unc-13(e450)*
