

# Deletion maps of 4,836 mutants

These image files describe the chromosomal mapping of deletion mutants in detail with schematic drawings for deletion primers and check-PCR primers along chromosome.

For more detailed information such as sequences of check -PCR primers, estimated PCR size and deletion rate (KO%), see our website of deletion mutants:

We report the construction and analysis of 4,836 heterozygous diploid deletion mutants covering 98.4% of the fission yeast genome. This resource provides a powerful tool for biotechnological and eukaryotic cell biology research. Comprehensive gene dispensability comparisons with budding yeast, the first time such studies have been possible between two eukaryotes, revealed that 83% of single copy
