

Data Supplement, Figure S5

A.

B.

Data supplement- Figure S5. *Changes in the Bacteroidetes:Firmicutes Ratio*

Determined by qPCR and Sequencing. A. The ratio of the ΔCt -Bacteroidetes: ΔCt -

Firmicutes from qPCR at weeks 0, 6 and 12. and B. %-Bacteroidetes: %-Firmicutes

from sequencing at weeks 0, 6 and 12. Data are presented as mean \pm SEM. Significant

differences are indicated as follows: “*” P< 0.05 for diet effect, “†” P< 0.05 activity effect

and “‡” P<0.05 diet and activity interaction.
