

**Table S4.** Effects of photoperiod and population of origin on female interest for males (= proportion of time spent with any male) in Corsican blue tits (n=34). The minimal adequate model is the null model, variables are presented in the reverse order in which they were removed from the model.

<b>Variable</b>	<b>Estimate</b>	<b>df</b>	<b>t</b>	<b>P</b>
Photoperiod	0.016	1	1.323	0.180
Origin	0.135	1	1.429	0.143
Time of day	-0.001	1	-0.019	0.850
Photoperiod*Origin	0.017	1	0.689	0.433
