

Table S5. Effects of photoperiod and population of origin on female preference strength (= proportion of time spent with the male chosen) in Corsican blue tits (n=34). Photoperiod is the only variable in the minimal adequate model, eliminated variables are presented in the reverse order in which they were removed from the model.

Variable	Estimate	df	t	P
Photoperiod	0.016	1	2.254	0.018*
Origin	0.070	1	1.296	0.155
Time of day	-0.001	1	-0.378	0.669
Photoperiod*Origin	0.009	1	0.659	0.449
