Online Resource 3: Weather stations used in the comparison of daily degree-day methods

This supplementary file details the weather stations used in the analysis comparing the different estimation methods (Table A3.1).

Table A3.1: Characteristics of weather stations used to compare methods of calculating daily degree-days. The range of hourly temperatures indicates the maximum and minimum temperatures that occur between 1 January 2007 and 31 December 2010, while the temperature average is the mean temperature over this time period.

Location	Latitude	Longitude	Elevation (m)	Mean temperature (standard deviation) °C
Everglades City, Florida	25.9	-81.318	1.2	22.8 (6.4)
Asheville, North Carolina	35.419	-82.557	641	12.3 (9.4)
Limestone, Maine	46.96	-67.883	224.6	4.5 (11.7)
