

Supplemental table 1: Body surface areas calculated with the different formulas using ideal weight and real weight.

<b>BSA</b>	<b>With ideal weight</b>	<b>With real weight</b>
<b>BSA (Dubois and Dubois)</b>	1.67 ± 0.15	2.01 ± 0.2
<b>BSA (Haycock)</b>	1.68 ± 0.14	2.11 ± 0.22 *
<b>BSA (Gehand and Georges)</b>	1.68 ± 0.14	2.12 ± 0.21 *
<b>BSA (Livingstone and Lee)</b>	1.67 ± 0.13	2.22 ± 0.23 *

BSA= Body surface area expressed as mean ± standard deviation.

\* p<0.05 vs BSA measured with Dubois nad Dubois and real weight.
