

**Figure S2.** Determination of STEC CFU in mouse tissues at various time points post-infection of 5-day old CD-1 mice via oral gavage with *E. coli* EDL933 ( $5 \times 10^8$  CFU/mouse). Points indicate values for individual mice, lines the geometric means. No bacteria were detected outside of the GI tract (limit of detection 2 CFU/gram, far right panel).
