

Figure S1. GC46.F0 induced RSV F-specific CD4+ T cells. Mice were immunized IM with GC46.F0 and challenged with 9×10^6 PFU RSV A2 4 weeks later. T cells responses were assessed by RSV-specific ICS at day 5 post-challenge with CD4+IFN- γ + shown as the percentage of CD4+IFN- γ + cells in the leukocyte gate. N=5 or 6 mice per group per time point. Statistical significance determined by one-way ANOVA where $p < 0.05$. *=statistically different from RSV-immunized mice; +=statistically different from FI-RSV-immunized mice.
