

Supplementary Figure 2 - Slope as an indicator of distinct effects of extracellular matrixes on cell migration. U87, U251N, MDA-MB231, MCF7 and HeLa cells grown on indicated extracellular matrixes were performed with ring cell migration assay and the slope were measured from Figure 5. One-way ANOVA Dunnett's Multiple Comparison Test: Compare all columns vs. Control, N = 2. ** p<0.001, ** p<0.01 and * p<0.05.
