

Supplemental Figures

Supplemental Figure 1. RET expression with Drug Treatment. Western blot showing RET expression in MCF-7 cells treated with vehicle, vandetanib, tamoxifen, or both drugs. Tamoxifen treatment reduces, but does not eliminate RET expression compared to vehicle treatment.

Supplemental Figure 2. RET Protein Expression in a Subset of Primary Cancers. Western blot showing expression of RET protein in primary cancer isolates. Top row indicates tumors characterized as negative (-) or positive (+) for RET expression by RNA analysis.
