

Supplementary figures

Supplementary Figure 1. Recovery of growth after glucose starvation in wild type and *dom34Δ* yeast.

The OD₆₀₀ of wild type or *dom34Δ* yeast, depleted of glucose or grown in glucose rich medium for 10 minutes, was followed after resuspension in glucose rich medium. Experiments were performed at the indicated temperatures. Means \pm standard deviations of 3 independent experiments are displayed. The OD₆₀₀ (which was approximately 0.2 at time = 0 minutes) was normalized to be 0.2 at time = 0 minutes.
