

Supplemental Figure 4

Hexamer of Ca²⁺-free MICU1. The entire hexamer is an approximated trimer of three dimers. Three dimers consisting of Mol C and Mol E, Mol B and Mol A as well as Mol F and Mol D are almost identical except for the orientation of the C-helices. The six molecules are colored cyan, blue, orange, red, green and yellow, respectively. The C-helix of each molecule is clustered in the center of the hexamer.
