LEGENDS FOR SUPPLEMENTARY DATA

Supplementary Figure 1. *ATGL does not bind to HA epitope:* In 293T cells expressing ATFL-CFP and p300-HA, HA antibodies were used to immunoprecipitate p300-HA and immunoblotted with HA (upper panel) and ATGL antibodies (lower panel). HA antibodies pulled-down p300 (left lane upper panel) but not ATGL (left lane lower panel).

Supplementary Figure 2. *Two- to threefold increase in overall FSP27 expression using adenovirus in human adipocytes:* FSP27-CFP (middle lane) and FSP27-HA (right lane) was expressed using adenovirus. Note the top band in the middle lane of upper panel is FSP27 labeled with CFP.
