

Additional file 4 - GR expression patterns in non-mutated and BRCA2-mutated ovarian cancer

A, relative GR mRNA levels were measured in 23 pairs of non-mutated and BRCA2-mutated ovarian cancer, and their adjacent normal tissue. Bar graphs show mean \pm SD. B, GR protein levels assessed by immunohistochemistry in 23 pairs of non-mutated and BRCA2-mutated ovarian cancer, and their adjacent normal tissue. The intensity of staining was divided into 10 units.
