

Table S2. Functional annotation of the downregulated, differentially expressed genes of Rasless MEFs.

The GeneCodis (Gene Annotation Co-occurrence Discovery) functional annotation tool (<http://genecodis.dacya.ucm.es>) was used to identify statistically significant functional associations linking particular gene subsets contained within the list of repressed loci occurring in Rasless MEFs (Table S1, Additional file 1, FDR=0.01) to specific cellular functionalities, including particular Biological Processes (section S2-BP), Transcriptional Factors (section S2-TF), Signaling Pathways (Section S2-KEGG) or miRNAs (Section S2-miRNA).

The column labelled “*Functional Category*” identifies the specific functional GO terms recognized in each case for the corresponding groups of loci listed under the column labelled “*Genes*”. The column labelled “*Number of Genes*” indicates the specific number of genes annotated to the indicated functionality, out of the total number (in parenthesis) of genes recognized by GeneCodis in the list of repressed genes of Rasless cells. The column labeled “*Corrected p-value*” refers to the statistical significance of the functional associations identified, and contains p-values calculated cases using the Hypergeometric Distribution and subsequently corrected by implementing the False Discovery Rate method of Benjamini and Hochberg [113].

In section S2-BP (pages 2-15), the column “*Functional Category*” assigns common colors to groups of related GO numbers and descriptions falling under the same, high level, general functional categories (DNA and RNA processing, Cell cycle, Cytoskeleton-regulated processes, Transport, Cell death, etc). In section S2-KEGG (pages 16-17), the column “*KEGG Pathway*” identifies KEGG number and denomination of signaling pathways potentially affected by the corresponding group of repressed loci listed in each case. In section S2-TF (pages 18-27), the “*Transcription Factors*” column identifies specific transcription factors that may account for repression of the corresponding groups of loci listed in each case. Finally, in section S2-miRNA (pages 28-53), the “*miRNA name*” column identifies specific mouse miRNAs that, according to current literature and databases, may contribute to the patterns of mRNA repression described for Rasless cells in Table S1.

Table S2-BP. Functional annotation to GO BIOLOGICAL PROCESSES of the downregulated, differentially expressed genes of Rasless MEFs
