

**Table S3. Functional annotation of the upregulated, differentially expressed genes of Rasless MEFs.**

The GeneCodis (Gene Annotation Co-occurrence Discovery) functional annotation tool (<http://genecodis.dacya.ucm.es>) was used to identify statistically significant functional associations linking particular gene subsets contained within the list of induced loci occurring in Rasless MEFs (Table S1, Additional file 1, FDR=0.01) to specific cellular functionalities, including particular Biological Processes (section S3-BP), Signalling Pathways (Section S3-KEGG), Transcriptional Factors (section S3-TF) or miRNAs (section S3-miRNA).

The column labelled “*Functional Category*” identifies the specific functional GO terms recognized in each case for the corresponding groups of loci listed under the column labelled “*Genes*”. The column labelled “*Number of Genes*” indicates the specific number of genes linked to the indicated functionality, out of the total number (in parenthesis) of genes recognized by GeneCodis in the list of induced genes of Rasless cells. The column labeled “*Corrected p-value*” refers to the statistical significance of the functional associations identified, and contains p-values calculated cases using the Hypergeometric Distribution and subsequently corrected by implementing the False Discovery Rate method of Benjamini and Hochberg [113].

In section S3-BP (pages 2-6), the column “*Functional category*” assigns common colors to groups of related GO numbers and descriptions falling under the same, high level, general functional categories (Metabolite processing, Signaling, Cell death, Transport, etc). In section S3-KEGG (pages 7-8), the column “*KEGG Pathway*” identifies KEGG number and denomination of signalling pathways potentially affected by the corresponding group of induced loci listed in each case. In section S3-TF (pages 9-15), the “*Transcription Factors*” column identifies specific transcription factors that may account for induction of the corresponding groups of loci listed in each chase. Finally, in section S3-miRNA (pages 16-40), the “*miRNA name*” column identifies specific mouse miRNAs that, according to current literature and databases, may contribute to the patterns of mRNA overexpression described for Rasless cells in Table S1.

**Table S3-BP. Functional annotation to GO BIOLOGICAL PROCESSES of the induced, overexpressed genes of Rasless MEFs.**
