

Supplementary Figure 4. IL-10 deficiency results in increased frequencies of IL-17 but not IFN- γ ⁺ T cells in the lungs. *Il-10*^{-/-} or C57BL/6 (WT) mice were infected with a sublethal dose influenza virus. At 7 d.p.i., antigen-specific IFN- γ or IL-17-producing CD8⁺ T cells in the BAL and lungs were assessed by FACS. Data were pooled from two independent experiments with similar results. *P* values were determined by unpaired two-tailed Student's *t* test. Values are means \pm s.d.; ns, not significant.
