

Supplementary Figure 9. Minimal role of NK cells in viral clearance during influenza. Depletion of NK cells from influenza virus infected mice was performed by administration of a depleting anti-NK1.1 monoclonal antibody at -1, 1 and 5 d.p.i. **(A)** NK cell depletion was confirmed by FACS. **(B)** Viral *pa* mRNA from NK cell-depleted mice was measured by qRT-PCR at day 7 p.i. *P* values were determined by unpaired two-tailed Student's *t* test. Values are means \pm s.d.; n.s, not significant.
