

SUPPLEMENTARY FIG. S1. Effect of serine/threonine kinase inhibitors on scAAV3 vector-mediated EGFP expression in Huh7 cells. Cells were transduced with scAAV3 vectors in the presence of increasing amounts of JNK inhibitor II (**A**), 12.5 μM p38 MAPK inhibitor (SB) (**B**), and 5 μM MG132 alone, or with 50 μM JNK Inhibitor II or 12.5 μM p38 MAPK inhibitor (**C**). Transgene expression was determined by fluorescence microscopy 72 hr post-transduction and assessed as total area of green fluorescence (pixel²) per visual field (mean \pm SD).
