Table S1. Annual catch (tonnes) and estimated run size (catch plus escapement, millions) of eastern Kamchatka pink salmon

Year	Catch	Run size
1971	18,829	30.8
1972	1,970	13.1
1973	31,150	20.5
1974	5,700	19.4
1975	40,407	46.8
1976	6,900	23.3
1977	30,100	57.7
1978	9,000	12.5
1979	39,400	59.1
1980	3,500	5.0
1981	41,500	65.0
1982	10,200	17.8
1983	25,700	41.6
1984	11,900	29.8
1985	18,300	24.8
1986	2,500	4.4
1987	34,700	56.3
1988	6,500	9.5
1989	57,500	68.8
1990	17,600	27.5
1991	74,700	97.2
1992	8,600	9.9
1993	52,173	69.8
1994	12,047	21.2
1995	51,244	78.0
1996	10,181	15.9
1997	82,798	99.7
1998	6,778	13.3
1999	83,640	107.6
2000	1,186	1.8
2001	42,714	43.4
2002	2,284	4.7
2003	56,709	66.7
2004	6,037	22.8
2005	47,403	100.5
2006	13,609	22.8
2007	72,712	93.7
2008	7,911	15.9
2009	138,886	173.1
2010	6,838	14.6
2011	182,365	225.3
2012	18,279	28.4

Catch data for 1971–2009 were reported in ref. 1; catch data for 2010–2012 were communicated by G. Khen. Run size for 1971–2005 reported in ref. 2. Run size for 2006–2012 was estimated from the relationship between catch and run size in 1971–2005, where run size = (0.0012 × catch) + 6.42; $r^2 = 0.90$, $P < 0.0001$.

Linear regression; annual salmon run values log normal transformed; slopes of relationships are positive or flat for hatch date and negative or flat for all other parameters. Salmon data are from refs. 1 and 2, and Table S1; seabird data are from refs. 3–6. Parameters with values in italics had differences in mean values between even and odd years at $P \leq 0.10$ (Tables S2 and S3). Parameters for omnivores regressed against eastern Kamchatka pink salmon abundance, and for planktivores against Norton Sound pink salmon abundance. See Tables S2 and S3 for species abbreviations; na, not applicable because clutch sizes = 1; un, unknown.

*Julian day.

[†]Number of nests with eggs per number of nest starts.

[‡]Number of eggs hatching per number of eggs laid.

[§]Number of chicks fledged per number of eggs hatched.

[¶]Number of chicks fledged per number of nest starts.
