

Additional file 7. Overexpression of control vector and E12 Ω ::TcLEC2 in cacao zygotic embryo transient assay. Fluorescent micrographs of GFP expression (visualization marker) in leaves were captured five days after transformation (Bars = 2mm). **A&B.** IZE transformed with control vector with white light and GFP fluorescence imaging. **C&D.** IZE transformed with E12 Ω ::TcLEC2 with white light and GFP fluorescence imaging.
