

**miR-375 activates p21 and suppresses telomerase activity by coordinately
regulating HPV E6/E7, E6AP, CIP2A, and 14-3-3 ζ**

Figure S1-2

Table S1

Figure S1

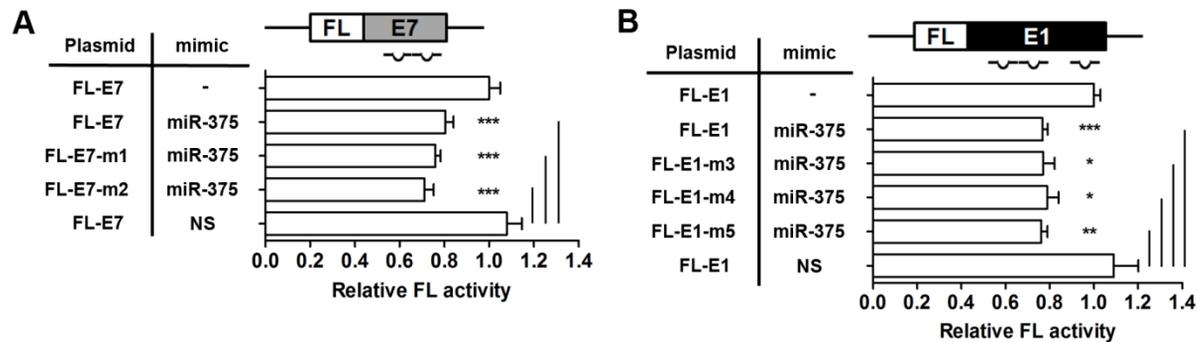

Figure S1. Mutation of single miR-375 binding site does not abolish the repression effect. (A) miR-375 interaction with E7 region was determined by relative FL expression from cells transfected with FL-E7 with or without miR-375-mimic transfection. Two individual mutations for putative miR-375 binding sites were generated (FL-E7-m1 or FL-E7-m2). (B) miR-375 interaction with E1 region was similarly determined. Three individual mutations were generated for each miR-375 binding site (FL-E1-m3, FL-E1-m4, and FL-E1-m5).

Figure S2

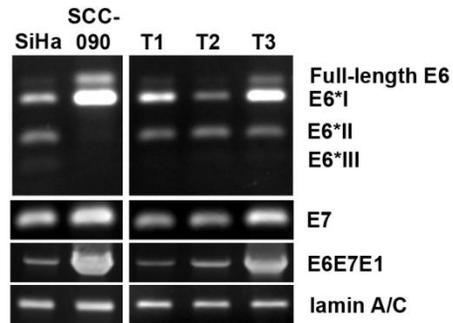

Figure S2. PCR amplification of E6, E7, and E6E7E1 transcripts in SiHa, SCC090, and three HPV16 positive oropharyngeal tumors (T1-T3). Lamin A/C was measured for internal control.

Table S1. Primer sequences for cloning and mutagenesis

Primer name	Sequences
HPV16-E7-F (for cloning)	5'-ggaattccatgcatgcagatacacctaca-3'
HPV16-E7-R (for cloning)	5'-gatcgcgccgcttaggtttctgagaacagatgg-3'
HPV16-E7-m1-F (for mutagenesis)	5'-aatagatggtccagctggacattgtgaaccggacagagcccattac-3'
