

Additional file 2. SERT is transported to the plasma membrane in HEK293-hSERT cells. (A-C) Double immunocytochemical staining for SERT (green) and the membrane maker cadherin (red) in HEK293-hSERT cells. SERT mainly colocalized with the membrane maker (cadherin) (C: merged). Scale bar, 10 μm . Results are representative of three independent experiments.
