

Figure S6

Figure S6 Supplemental ion response characterisation of the *Arabidopsis zif2-1* mutant. Effect of excess of essential/beneficial cations and of rhizotoxic cations on shoot biomass (upper panel), chlorophyll content (middle panel) and PR elongation (lower panel) of wild-type (Col-0) and mutant (*zif2-1*) seedlings. Results are representative of two independent experiments and values represent means \pm SD ($n=16$). No statistical differences between mutant and wild type were detected under each condition ($P>0.05$; Student's *t*-test).
