Table of contents

Figure S1. Proteomic analysis of stationary phase yeast.

Figure S2. Quantitative analysis of acetylation dynamics in yeast.

Figure S3. Nonenzymatic acetylation by acetyl-CoA.

Figure S4. Validating partial chemical acetylation by acetyl-phosphate.

Supplemental text. Validating partial chemical acetylation by acetyl-phosphate.

Supplemental text. Estimating acetylation stoichiometry based on unmodified corresponding peptides.

Figure S5. Yeast acetylation sites are sensitive to treatment with acetyl-phosphate.

Figure S6. Unmodified corresponding peptide (CP) abundance is unaffected by treatment with AcP.

Figure S7. Determining absolute acetylation stoichiometry using AQUA.

Figure S8. Acetylation stoichiometry is proportional to abundance-corrected acetylated peptide intensity.

Figure S9. Functional characterization of acetylation stoichiometry.

Table S1. Quantitative MS experiments performed in this study.
