

SUPPLEMENTARY FIG. S1. Identification of hydrogen sulfide (H₂S)-synthesizing enzymes in *C. elegans*. Transverse sections of *C. elegans* showing diaminobenzidine staining for cystathionine γ lyase (CSE) (A), cystathionine β synthetase (CBS) (B), and 3-mercaptopyruvate transferase (3-MST) (C). Magnification is $\times 40$. Horizontal bar shows scale (100 μ m).
