

SUPPLEMENTARY FIG. S2. Expression of genes for H₂S-synthesizing enzymes in *C. elegans*. Quantitative polymerase chain reaction (qPCR) quantitation of genes encoding for known orthologues of 3-MST (*mpst1-7*), CSE (*cth-1* and *cth-2*), and CBS (*cbs-1a*, *cbs-1b*, and *cbs-2*) in wild-type *C. elegans*. Data show fold expression of each gene relative to a housekeeping gene, *pmp3*, after normalization against the housekeeping gene control, *ama-1*, and are mean \pm SE of four separate experiments using at least 5000 animals per experiment.
