

SUPPLEMENTARY FIG. S2. RNase refolding over time with hBCAT +/- protein disulphide isomerase (PDI). PDI and each respective hBCAT isoform were incubated with rdRNase ($30 \mu M$), and aliquots were removed at 24 h to determine the effect on RNase folding. Change in absorbance at 295 nm over time for PDI (●), hBCATc (○), hBCATm (▼), PDI+hBCATc (△), and PDI+hBCATm (■). Graph is representative of three independent runs.
