

Table S1. Number of cells replated per 10-cm dish after irradiation for colony formation.

Dose (Gy)	Cell types				Statistical significance
	HLEC1		WI-38		
0	300 ±	2 ^a	302 ±	3 ^a	N.S. ^b
0.5	400 ±	4 ^a	401 ±	4 ^a	N.S. ^b
1	550 ±	2 ^a	550 ±	1 ^a	N.S. ^b
2	1099 ±	3 ^a	1098 ±	3 ^a	N.S. ^b
4	5206 ±	10 ^a	5194 ±	9 ^a	N.S. ^b
6	14956 ±	5202 ^a	17775 ±	4100 ^a	N.S. ^b

^aThe data represent means and SD of three independent experiments with quadruplicate measurements. ^bNon significant when the number of HLEC1 plated was compared with that of WI-38. *p* values ranged between 0.10 and 0.44.
